With a holder of the type mentioned in the opening paragraph it is known to hold a tool part in such a manner that the tool part may be removed from the holder and the same reinserted in the holder in a direction parallel to the axis of the tool part. For this purpose the holder includes a holder shaft which is coupled to the tool part and which is displaceable in the holder in the first direction and the tool part is connected to the holder shaft for longitudinal displacement thereof. A rotational movement in a certain sense about the longitudinal axis of the tool part may 82157476af
